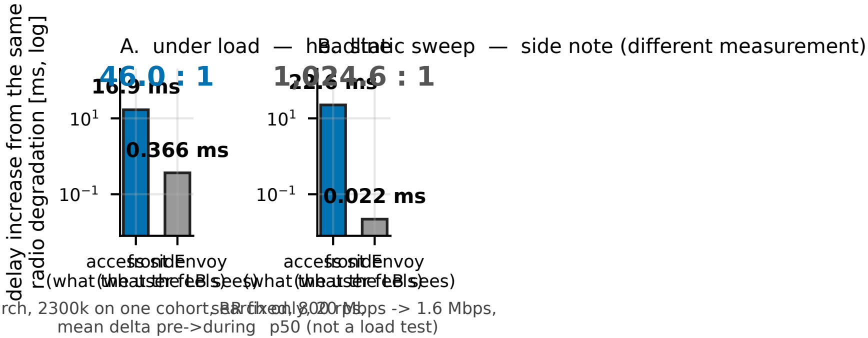
F5 The load balancer cannot see radio degradation (two independent measurements, not comparable to each other)



A. under load — headline
46.0 : 1
16.9 ms
0.366 ms
B. static sweep — side note (different measurement)
1,024.6 : 1
22.6 ms
0.022 ms
delay increase from the same radio degradation [ms, log]
10^{1}
10^{-1}
access side (what the user feels)
front Envoy (what the LB sees)
c1 search, 2300k on one cohort, RR fixed, 8,000 rps, mean delta pre->during
search only, 20 Mbps -> 1.6 Mbps, p50 (not a load test)
